```

WEEK 1: Foundation Setup (Sep 20-26)

Day 1-2: Project Foundation

Krishna (Tech Lead)

Main Focus: Project Architecture

Tasks:

1. **Create React Native Project**
   - Install React Native CLI
   - Run: `npx react-native init AttendSmart`
   - Create folder structure as shown above
2. **Setup Navigation**
   - Install React Navigation
   - Create main navigation file in `src/navigation/`

- Setup basic routes for Teacher/Student/CR

3. **Database Foundation**
   - Install react-native-sqlite-storage
   - Create `src/database/database.js`
   - Setup basic database connection
   - Create initial table structures
4. **Git Repository**
   - Initialize Git repo
   - Create branches: main, development, feature branches
   - Setup .gitignore for React Native

Files Krishna Creates:

- `src/navigation/AppNavigator.js`
- `src/database/database.js`
- `src/database/schema.js`
- `App.js` (main app file)

Shambavi (Frontend Lead)

Main Focus: Basic App Structure

Tasks:

1. **Setup Development Environment**
   - Install React Native development tools
   - Setup Android Studio/Xcode
   - Test app running on device/simulator
2. **Create Basic Screens**
   - Create placeholder screens in `src/screens/`
   - Setup basic navigation between screens
   - Create role selection screen (Teacher/Student/CR)
3. **Basic Styling**
   - Create `src/styles/` folder
   - Setup basic colors and fonts
   - Create reusable style components

Files Shambavi Creates:

- `src/screens/LoginScreen.js`
- `src/screens/teacher/TeacherHomeScreen.js`

- `src/screens/student/StudentHomeScreen.js`
- `src/styles/colors.js`
- `src/styles/commonStyles.js`

Rakshitha (Design Lead)

Main Focus: AI-Generated Design System

Tasks:

1. **Generate Design System**
   - Use ChatGPT to create design prompts
   - Generate color schemes for education app
   - Create icon designs using AI tools
   - Design app logo and splash screen
2. **Create Style Guide**
   - Document colors, fonts, spacing
   - Create component design guidelines
   - Generate UI mockups for major screens
3. **Asset Creation**
   - Create app icons in multiple sizes
   - Generate button styles and card designs
   - Create progress ring designs for attendance

Files Rakshitha Creates:

- `src/assets/icons/` (all app icons)
- `docs/StyleGuide.md`
- `docs/ColorPalette.md`
- Design mockups for reference

Yashas (Krishna Support)

Main Focus: Learning and Documentation

Tasks:

1. **Environment Setup**
   - Setup React Native development environment
   - Install all required tools and dependencies
   - Test app compilation and running
2. **Research and Documentation**

- Research React Native best practices
- Create development setup guide
- Document folder structure and conventions

3. **Testing Setup**
   - Learn basic testing for React Native
   - Setup testing tools and environment
   - Create testing documentation

Files Yashas Creates:

- `docs/DevelopmentSetup.md`
- `docs/TestingGuide.md`
- `docs/ProjectStructure.md`

Nuhan (Shambavi Support)

Main Focus: Learning and Basic UI

Tasks:

1. **Learn React Native Basics**
   - Complete React Native tutorial
   - Learn basic components (View, Text, TouchableOpacity)
   - Practice creating simple screens
2. **Help with Screen Creation**
   - Create simple loading screens
   - Build error message screens
   - Create basic form components
3. **UI Testing**
   - Test screens on different devices
   - Check responsiveness across screen sizes
   - Document UI issues and suggestions

Files Nuhan Creates:

- `src/screens/LoadingScreen.js`
- `src/screens/ErrorScreen.js`
- `src/components/LoadingSpinner.js`

Day 3-7: MVP Development

Krishna

Main Focus: Core Functionality

Tasks:

1. **QR Code System**
   - Install react-native-qrcode-generator
   - Install react-native-qrcode-scanner
   - Create QR generation for sessions
   - Build QR scanning functionality
2. **Session Management**
   - Create session creation logic
   - Build timer for 3-5 minute windows
   - Setup session storage in SQLite
3. **Database Operations**
   - Create all database tables
   - Build CRUD operations for attendance
   - Setup data relationships

Files Krishna Works On:

- `src/services/QRService.js`
- `src/services/SessionService.js`
- `src/database/AttendanceDB.js`
- `src/utils/TimeUtils.js`

Shambavi + Nuhan

Main Focus: UI Implementation

Tasks:

1. **Teacher Screens**
   - Build Teacher Dashboard with class cards
   - Create session control screens (start/stop)
   - Build live attendance view
2. **Student Screens**
   - Create Student Dashboard with subjects
   - Build QR scanner screen with camera

- Create attendance confirmation screens

3. **Navigation Integration**
   - Connect all screens with navigation
   - Add proper screen transitions
   - Setup role-based routing

Files They Work On:

- `src/screens/teacher/ClassDashboard.js`
- `src/screens/teacher/SessionControl.js`
- `src/screens/student/QRScannerScreen.js`
- `src/screens/student/AttendanceHistory.js`

Rakshitha

Main Focus: UI Design Implementation

Tasks:

1. **Convert AI Designs to Components**
   - Create styled components from AI designs
   - Build reusable UI components
   - Create animated elements for better UX
2. **Icon and Asset Integration**
   - Add all icons to appropriate screens
   - Create styled buttons and cards
   - Setup app theming system

Files Rakshitha Works On:

- `src/components/StyledButton.js`
- `src/components/ClassCard.js`
- `src/components/AttendanceRing.js`
- `src/styles/theme.js`

Yashas

Main Focus: QR Testing and Documentation

Tasks:

1. **QR Functionality Testing**
   - Test QR generation and scanning
   - Test across different devices

- Document QR system workflow

2. **Performance Testing**
   - Monitor app performance
   - Test battery usage
   - Document optimization needs

Files Yashas Works On:

- `tests/QRTest.js`
- `docs/QRSystemGuide.md`
- `docs/PerformanceReport.md`

WEEK 2: Scheduling and Notifications (Sep 27 - Oct 3)

Krishna + Yashas

Main Focus: Backend Logic

Tasks:

1. **Geofencing Implementation**
   - Install react-native-geolocation-service
   - Create campus boundary detection
   - Build location verification system
2. **Notification System**
   - Install react-native-push-notification
   - Create notification scheduling
   - Build reminder system for teachers/students
3. **Session Scheduling**
   - Create timetable management
   - Build automatic session creation
   - Setup teacher confirmation flow

Files They Create:

- `src/services/GeofenceService.js`
- `src/services/NotificationService.js`
- `src/services/ScheduleService.js`
- `src/utils/LocationUtils.js`

Shambavi + Nuhan

Main Focus: UI for New Features

Tasks:

1. **Scheduling Screens**
   - Build timetable display screens
   - Create session confirmation dialogs
   - Build notification preference screens
2. **Geofence UI**
   - Create location permission screens
   - Build geofence status indicators
   - Create location-based error messages

Files They Work On:

- `src/screens/teacher/TimetableScreen.js`
- `src/screens/common/LocationPermission.js`
- `src/components/GeofenceStatus.js`
- `src/components/NotificationCard.js`

Rakshitha

Main Focus: Enhanced UI Design

Tasks:

1. **Notification Design**
   - Create notification templates
   - Design alert and reminder styles
   - Build loading states for location
2. **Timetable Design**
   - Create calendar-style timetable view
   - Design session status indicators
   - Build responsive layout for schedules

Files Rakshitha Works On:

- `src/components/NotificationTemplate.js`
- `src/components/TimetableCard.js`
- `src/styles/notificationStyles.js`

Ananya + Hitharth

Main Focus: Learning and Testing

Tasks:

1. **Feature Testing**
   - Test notification delivery
   - Test geofencing accuracy
   - Document testing results
2. **User Experience Testing**
   - Test app flow from user perspective
   - Identify usability issues
   - Create improvement suggestions

Files They Create:

- `docs/NotificationTestResults.md`
- `docs/GeofenceTestResults.md`
- `docs/UserExperienceReport.md`

WEEK 3: Proximity Detection (Oct 4-10)

Krishna + Yashas

Main Focus: BLE Implementation

Tasks:

1. **BLE Setup**
   - Install react-native-ble-plx
   - Create BLE scanning functionality
   - Build RSSI measurement system
2. **Session UUID System**
   - Create unique session identifiers
   - Build session broadcasting
   - Setup session discovery
3. **Proximity Classification**
   - Create near/far detection logic
   - Build room calibration system
   - Setup proximity thresholds

Files They Create:

- `src/services/BLEService.js`
- `src/services/ProximityService.js`
- `src/utils/SessionUUID.js`
- `src/database/CalibrationDB.js`

Shambavi + Nuhan

Main Focus: Proximity UI

Tasks:

1. **BLE Status Screens**
   - Create Bluetooth permission screens
   - Build proximity status indicators
   - Create connection status displays
2. **Calibration Interface**
   - Build room calibration wizard
   - Create distance measurement tools
   - Build proximity testing interface

Files They Work On:

- `src/screens/teacher/RoomCalibration.js`
- `src/screens/common/BluetoothPermission.js`
- `src/components/ProximityIndicator.js`
- `src/components/BLEStatus.js`

Rakshitha

Main Focus: Proximity Visualization

Tasks:

1. **Visual Indicators**
   - Design proximity status animations
   - Create distance visualization
   - Build connection strength indicators
2. **Calibration UI**
   - Design step-by-step calibration flow
   - Create visual distance guides
   - Build calibration success/failure screens

Files Rakshitha Works On:

- `src/components/ProximityAnimation.js`
- `src/components/DistanceVisualizer.js`
- `src/styles/proximityStyles.js`

Ananya

Main Focus: CR Approval System

Tasks:

1. **CR Interface Development**
   - Learn React Native component creation
   - Build CR approval screens
   - Create simple Yes/No voting interface
2. **Peer Verification Logic**
   - Understand peer sampling concept
   - Build random peer selection
   - Create peer notification system

Files Ananya Creates:

- `src/screens/cr/ApprovalScreen.js`
- `src/services/PeerVerificationService.js`
- `src/components/ApprovalCard.js`

Hitharth

Main Focus: Teacher Exception Handling

Tasks:

1. **Exception Interface**
   - Learn teacher workflow requirements
   - Build exception handling screens
   - Create manual override interface
2. **Analytics Foundation**
   - Understand attendance data structure
   - Learn basic chart creation
   - Setup analytics data collection

Files Hitharth Creates:

- `src/screens/teacher/ExceptionHandling.js`

- `src/services/AnalyticsService.js`
- `src/components/ExceptionCard.js`

WEEK 4: Face Recognition (Oct 11-17)

Krishna + Yashas

Main Focus: Biometric Integration

Tasks:

1. **MediaPipe Setup**
   - Install MediaPipe for React Native
   - Setup face detection system
   - Create facial landmark detection
2. **Liveness Detection**
   - Build passive liveness checks
   - Create smile detection using landmarks
   - Setup risk-based authentication
3. **Fallback Systems**
   - Integrate device fingerprint authentication
   - Build authentication flow management
   - Create multi-modal authentication

Files They Create:

- `src/services/FaceRecognitionService.js`
- `src/services/LivenessDetection.js`
- `src/services/AuthenticationService.js`
- `src/utils/BiometricUtils.js`

Shambavi + Nuhan

Main Focus: Camera and Authentication UI

Tasks:

1. **Camera Interface**
   - Build face recognition camera screen
   - Create liveness detection UI with instructions
   - Build authentication result screens
2. **Authentication Flows**

- Create step-by-step authentication wizard
- Build fallback authentication screens
- Create biometric enrollment flow

Files They Work On:

- `src/screens/common/FaceRecognitionScreen.js`
- `src/screens/common/BiometricEnrollment.js`
- `src/components/CameraInterface.js`
- `src/components/AuthenticationResult.js`

Rakshitha

Main Focus: Authentication UI Design

Tasks:

1. **Camera UI Design**
   - Design face recognition interface
   - Create liveness detection animations
   - Build authentication progress indicators
2. **Instruction Design**
   - Create step-by-step instruction screens
   - Design success/failure result screens
   - Build enrollment wizard design

Files Rakshitha Works On:

- `src/components/FaceRecognitionUI.js`
- `src/components/LivenessInstructions.js`
- `src/styles/authenticationStyles.js`

Ananya

Main Focus: Barometric Pressure Integration

Tasks:

1. **Sensor Integration**
   - Learn React Native sensor APIs
   - Install barometric pressure libraries
   - Create floor detection logic
2. **Floor Calibration**
   - Build floor baseline recording

- Create floor difference calculation
- Setup building floor mapping

Files Ananya Creates:

- `src/services/BarometricService.js`
- `src/services/FloorDetectionService.js`
- `src/utils/PressureUtils.js`

Hitharth

Main Focus: Advanced Analytics

Tasks:

1. **Chart Implementation**
   - Install React Native chart libraries
   - Create attendance trend charts
   - Build real-time attendance monitoring
2. **Teacher Analytics**
   - Create attendance percentage calculations
   - Build class performance analytics
   - Setup data visualization components

Files Hitharth Creates:

- `src/components/AttendanceChart.js`
- `src/components/TrendAnalysis.js`
- `src/screens/teacher/AnalyticsScreen.js`

WEEK 5: Student Dashboard and Recommendations (Oct 18-24)

Krishna + Yashas

Main Focus: Recommendation System

Tasks:

1. **Barometric Integration**
   - Combine BLE with barometric data
   - Create multi-sensor proximity detection
   - Build fusion logic for accuracy
2. **Recommendation Algorithm**

- Create attendance percentage tracking
- Build threshold monitoring system
- Create recovery recommendation logic

Files They Create:

- `src/services/SensorFusion.js`
- `src/services/RecommendationEngine.js`
- `src/utils/AttendanceCalculations.js`

Shambavi + Nuhan

Main Focus: Student Dashboard

Tasks:

1. **Dashboard Implementation**
   - Create student home screen with progress rings
   - Build subject cards with attendance percentages
   - Create detailed attendance history views
2. **Recommendation Interface**
   - Build recommendation display system
   - Create threshold alert notifications
   - Build recovery plan interface

Files They Work On:

- `src/screens/student/StudentDashboard.js`
- `src/screens/student/SubjectDetails.js`
- `src/components/ProgressRing.js`
- `src/components/RecommendationCard.js`

Rakshitha

Main Focus: Gamification Design

Tasks:

1. **Dashboard Design**
   - Create gamified progress indicators
   - Design achievement badges and streaks
   - Build motivational UI elements
2. **Visual Data Representation**
   - Design attendance visualization

- Create progress charts and graphs
- Build alert and notification designs

Files Rakshitha Works On:

- `src/components/GameifiedProgressRing.js`
- `src/components/AchievementBadge.js`
- `src/styles/gamificationStyles.js`

Ananya

Main Focus: Student Features

Tasks:

1. **Percentage Calculations**
   - Build attendance percentage logic
   - Create threshold monitoring
   - Setup automatic alert triggers
2. **Badge and Achievement System**
   - Create streak tracking
   - Build achievement unlock logic
   - Setup motivational notifications

Files Ananya Creates:

- `src/services/AttendanceTracker.js`
- `src/services/AchievementService.js`
- `src/utils/StreakCalculator.js`

Hitharth

Main Focus: Teacher Tools Enhancement

Tasks:

1. **Advanced Teacher Dashboard**
   - Build comprehensive teacher analytics
   - Create at-risk student identification
   - Setup performance trend analysis
2. **Bulk Operations**
   - Create bulk attendance operations
   - Build batch student management
   - Setup data export functionality

Files Hitharth Creates:

- `src/screens/teacher/AdvancedAnalytics.js`
- `src/services/BulkOperations.js`
- `src/components/AtRiskStudentList.js`

WEEK 6: Notices and Excuse System (Oct 25-31)

Krishna + Yashas

Main Focus: Notice and Excuse Backend

Tasks:

1. **Notice Broadcasting System**
    - Create notice creation and distribution
    - Build holiday and schedule management
    - Setup notice categorization
2. **Excuse Request System**
    - Build excuse submission backend
    - Create teacher approval workflow
    - Setup excuse status tracking

Files They Create:

- `src/services/NoticeService.js`
- `src/services/ExcuseService.js`
- `src/database/NoticeDB.js`
- `src/database/ExcuseDB.js`

Shambavi + Nuhan

Main Focus: Notice and Excuse UI

Tasks:

1. **Notice Display System**
    - Build notice viewing interface
    - Create holiday calendar display
    - Build notice categorization UI
2. **Excuse Request Interface**
    - Create excuse submission forms
    - Build teacher review interface

- Create excuse status tracking

Files They Work On:

- `src/screens/teacher/NoticeManagement.js`
- `src/screens/student/NoticeView.js`
- `src/screens/student/ExcuseSubmission.js`
- `src/screens/teacher/ExcuseReview.js`

Rakshitha

Main Focus: Notice and Calendar Design

Tasks:

1. **Notice Interface Design**
   - Design notice templates
   - Create calendar interface design
   - Build holiday display design
2. **Excuse Form Design**
   - Design excuse submission forms
   - Create teacher review interface
   - Build status tracking interface

Files Rakshitha Works On:

- `src/components/NoticeTemplate.js`
- `src/components/HolidayCalendar.js`
- `src/components/ExcuseForm.js`
- `src/styles/noticeStyles.js`

Ananya

Main Focus: Advanced Notice Features

Tasks:

1. **Notice Broadcasting Logic**
   - Build notice distribution system
   - Create targeted notice delivery
   - Setup notice scheduling
2. **Calendar Integration**
   - Build holiday calendar logic
   - Create schedule change management

- Setup calendar synchronization

Files Ananya Creates:

- `src/services/NoticeBroadcast.js`
- `src/services/CalendarService.js`
- `src/utils/ScheduleManager.js`

Hitharth

Main Focus: Advanced System Features

Tasks:

1. **Comprehensive Analytics**
   - Build institution-level analytics
   - Create department comparison tools
   - Setup automated reporting
2. **Data Export and Reporting**
   - Create CSV/PDF export functionality
   - Build automated report generation
   - Setup analytics dashboard

Files Hitharth Creates:

- `src/services/ReportGenerator.js`
- `src/services/DataExport.js`
- `src/screens/admin/InstitutionAnalytics.js`

WEEK 7: Offline Mesh Sync (Nov 1-7)

Krishna + Yashas

Main Focus: Offline Architecture

Tasks:

1. **Event-Based Architecture**
   - Create offline event logging system
   - Build event synchronization logic
   - Setup conflict resolution
2. **Mesh Synchronization**
   - Build peer-to-peer data sync
   - Create session host management

- Setup cryptographic signatures

Files They Create:

- `src/services/OfflineSync.js`
- `src/services/EventLog.js`
- `src/services/MeshNetwork.js`
- `src/utils/Cryptography.js`

Shambavi + Nuhan

Main Focus: Offline UI

Tasks:

1. **Offline Status Interface**
   - Build offline mode indicators
   - Create sync progress displays
   - Build connectivity status interface
2. **Data Management Interface**
   - Create offline data management screens
   - Build sync conflict resolution UI
   - Setup data recovery interface

Files They Work On:

- `src/screens/common/OfflineStatus.js`
- `src/screens/common/SyncProgress.js`
- `src/components/ConnectivityIndicator.js`
- `src/components/SyncStatus.js`

Rakshitha

Main Focus: Offline Experience Design

Tasks:

1. **Offline State Design**
   - Design offline mode indicators
   - Create sync status animations
   - Build connectivity transition designs
2. **Data Management Design**
   - Design data sync interface
   - Create conflict resolution screens

- Build system status displays

Files Rakshitha Works On:

- `src/components/OfflineIndicator.js`
- `src/components/SyncAnimation.js`
- `src/styles/offlineStyles.js`

Ananya

Main Focus: Advanced Analytics

Tasks:

1. **Institution Analytics**
   - Build cross-department analytics
   - Create comparative analysis tools
   - Setup predictive analytics
2. **Performance Monitoring**
   - Create system performance tracking
   - Build usage analytics
   - Setup optimization recommendations

Files Ananya Creates:

- `src/services/InstitutionAnalytics.js`
- `src/services/PerformanceMonitor.js`
- `src/utils/PredictiveAnalytics.js`

Hitharth

Main Focus: System Administration

Tasks:

1. **Admin Tools**
   - Build system configuration tools
   - Create user management interface
   - Setup system monitoring dashboard
2. **Security and Backup**
   - Create backup and recovery tools
   - Build security audit features
   - Setup system health monitoring

Files Hitharth Creates:

- `src/screens/admin/SystemConfiguration.js`
- `src/services/BackupService.js`
- `src/services/SecurityAudit.js`

WEEK 8: Polish and Integration (Nov 8-14)

All Team Members - Integration and Testing

Krishna + Yashas

Main Focus: Technical Polish

Tasks:

1. **Security Implementation**
   - Add encryption for sensitive data
   - Implement secure authentication
   - Setup data protection measures
2. **Performance Optimization**
   - Optimize database queries
   - Improve app loading times
   - Reduce battery consumption
3. **Bug Fixes and Stability**
   - Fix critical bugs
   - Improve error handling
   - Enhance app stability

Shambavi + Nuhan

Main Focus: UI/UX Polish

Tasks:

1. **Interface Refinement**
   - Polish all screen designs
   - Improve user experience flows
   - Add smooth animations
2. **Accessibility Improvements**
   - Add accessibility features
   - Improve font sizing and contrast

- Test with screen readers

3. **Cross-Platform Testing**
   - Test on multiple devices
   - Ensure consistent experience
   - Fix platform-specific issues

Rakshitha

Main Focus: Design Finalization

Tasks:

1. **Final Design Review**
   - Review all screen designs
   - Ensure consistent branding
   - Polish visual elements
2. **Marketing Materials**
   - Create app store screenshots
   - Design promotional materials
   - Build demo presentation assets

Ananya

Main Focus: Analytics and Testing

Tasks:

1. **Analytics Validation**
   - Test all analytics features
   - Validate data accuracy
   - Ensure proper reporting
2. **Performance Testing**
   - Test app performance
   - Monitor resource usage
   - Document performance metrics

Hitharth

Main Focus: System Testing

Tasks:

1. **End-to-End Testing**

- Test complete user workflows
- Validate all features
- Document test results

2. **Deployment Preparation**
   - Prepare app for deployment
   - Create deployment documentation
   - Setup monitoring systems

WEEK 9: Final Deployment and Demo (Nov 15-21)

All Team Members - Final Sprint

Krishna

Main Focus: Technical Demo Preparation

- Prepare technical demonstration
- Create developer documentation
- Ensure app stability for demo

Shambavi

Main Focus: UI/UX Showcase

- Prepare UI/UX demonstration
- Create user experience showcase
- Document design decisions

Rakshitha

Main Focus: Design Portfolio

- Create design process documentation
- Showcase design evolution
- Prepare design presentation

Ananya

Main Focus: Analytics Demo

- Prepare analytics demonstration
- Create sample data for demo
- Document analytics capabilities

Hitharth

Main Focus: System Demo

- Prepare system overview demo
- Create deployment documentation
- Showcase technical architecture

Yashas

Main Focus: Testing Documentation

- Complete testing documentation
- Create user testing reports
- Document quality assurance process

Nuhan

Main Focus: User Guide

- Complete user guide documentation
- Create help and support materials
- Document troubleshooting guide

Daily Work Schedule Recommendations

Krishna (4-5 hours daily)

- **Morning (2-3 hours):** Core development work
- **Evening (2 hours):** Code review and architecture planning

Shambavi (4-5 hours daily)

- **Morning (2-3 hours):** UI development
- **Evening (2 hours):** Integration with Krishna's backend

Rakshitha (2-3 hours daily)

- **Morning (1-2 hours):** Design work
- **Evening (1 hour):** Design implementation and testing

Ananya, Hitharth, Yashas, Nuhan (2-3 hours daily)

- **Evening (2-3 hours):** Feature development and testing
- **Weekend (extra hours):** Catch up and integration work

Communication Protocol

Daily Check-ins (15 minutes)

- **Time:** Every evening at 8 PM
- **Format:** WhatsApp group or Google Meet
- **Agenda:** Progress update, blockers, next day plan

Weekly Reviews (1 hour)

- **Time:** Every Sunday at 7 PM
- **Format:** Google Meet with screen sharing
- **Agenda:** Demo progress, assign next week tasks, resolve issues

Emergency Support

- **Channel:** WhatsApp group for urgent blockers
- **Response Time:** Within 2 hours during working days
- **Escalation:** Krishna and Shambavi for technical issues

Success Criteria for Each Week

Week 1: ✅ Basic app running with QR attendance

Week 2: ✅ Geofencing and notifications working

Week 3: ✅ BLE proximity detection functional

Week 4: ✅ Face recognition integrated

Week 5: ✅ Complete student dashboard with recommendations

Week 6: ✅ Notice system and excuse requests working

Week 7: ✅ Offline functionality implemented

Week 8: ✅ All features polished and tested

Week 9: ✅ Demo-ready application complete

Follow this guide step by step, and your AttendSmart project will be successfully completed in 9 weeks!
